

## PROBLEM

My Ardo Bellis pump doesn't power on

## SOLUTION

- Check that the Bellis battery is fully charged for at least 2 hours
- Press the On/Off Power Button for at least 2 seconds to turn the Bellis on or off; this is a safety feature so that Bellis is not accidentally turned on or off

My Ardo Bellis pump doesn't power on

- Make sure your breast pump is connected to power
- Try an alternative power outlet
- Make sure your power adapter or USB cable are not damaged
- If your Bellis still doesn't power on, contact Ardo customer service

## PROBLEM

My Bellis pump switches off by itself after a short time

## SOLUTION

- Make sure the battery is fully charged for at least 3 hours
- Check whether the Memory Plus button (top left icon) is blinking; if it is blinking, the Memory Plus function has been activated with a prior pump session. To erase the program stored in Memory Plus, press and hold the Memory Plus button until you hear a beep; the Memory Plus button will stop blinking and Bellis will operate normally
- If the pump is fully charged and the Memory Plus button is not blinking when the pump is first turned on, contact Ardo customer service

My pump has low or no suction

- If you are not using your pumpset which came with Bellis, make sure you are using the correct pumpset cover with insert in the lid

- To reorder additional pumpsets to work with Bellis, make sure to order Ardo pumpsets which are marked to work with ALL Ardo breast pumps
- Pumpsets which were shipped with Calypso breast pumps will NOT properly work with Bellis; pumpsets shipped with Bellis WILL work perfectly with Calypso breast pumps

## PROBLEM

## SOLUTION

My pump has low or no suction

- If pumping only on one side (single pumping), make sure the second tube connector is closed

My pump has low or no suction

- Make sure the tube connector is properly connected to the pump body

My pump has low or no suction

- When putting the pump set together after cleaning, make sure the white lip valve is also properly assembled

## PROBLEM

## SOLUTION

My pump has low or no suction

- When removing the lip valve for cleaning, do NOT use fingernails; instead, simply pull by fingers, the lip valve is very flexible
- Make sure the lip valve is intact with no tears, cracking, or lips sticking together
- Ardo lip valves should have a slight opening between the lips
- Replace lip valves if they are not intact

My pump has low or no suction

- Make sure the membrane pot is lying flat in the breast shell top BEFORE you put on the lid over
- Make sure the membrane pot is undamaged
- Replace membrane pot if damaged

## PROBLEM

My pump has low or no suction

## SOLUTION

- Make sure the smooth side of the membrane pot is facing outwards with the ridges on the inside

My pump has low or no suction

- Make sure the lid cover is properly closed
- Line up the mark on the top of the flange funnel with the mark cover, then turn clockwise ("Line & Lock")

## PROBLEM

## SOLUTION

My pump has low or no suction

- If using a hard insert, make sure the insert is assembled correctly
- Gently push the insert into the breast shell
- Twist and turn the insert to the right to create an air tight seal

My pump has low or no suction

- If using a silicone insert, make sure the silicone insert is placed into the breast shell correctly
- Place the insert into the breast shell and push all the way in until secure
